Wood Fired Clay Vessels

Jake Van Wyk

Stoneware clay, wheel and hand built construction,
sprayed glaze with iron oxide under-washes, fired to 2350 degrees.

32 inches tall

2012

While far more labor intensive than traditional gas fossil fuel firing, wood firing provides fly ash effects and streaking during the final glaze fluxing.

Wood Fired Clay Vessels

Jake Van Wyk

Stoneware clay, wheel and hand built construction,
sprayed glaze with iron oxide under-washes, fired to 2350 degrees.

28 inches tall

Iowa Insect Series 2012 Digital Collage—Giclée Prints

The “Iowa Insect Series” of ten images was completed during the month of January, 2012. Versluis initiated the collaboration, which was conducted long distance, and image files were volleyed back and forth. Each designer/artist added, subtracted, or modified the image until both felt the print was finished and the series completed.

Collaborative prints by David Versluis, Dordt College, and Roy Behrens, University of Northern Iowa. Both teach graphic design.
